Shower Glass Care Instructions

Glass Maintenance

- After each use, a simple swipe of a squeegee will help maintain that brand-new look and allow for easier deep cleaning. Any coating applied to your glass does not make it self-cleaning, but rather aids in keeping the glass protected from long term damage.
- The glass should be cleaned every few weeks using a damp microfiber cloth and a mild detergent or soap to remove soap scum and grime from the glass.
- If you prefer, a general glass cleaner and a cloth are also suitable, as well as the recommended cleaners.
- For areas with hard water, due to a high concentrate of mineral deposits such as lime and calcium, a buildup may occur on the protective coating and not easily removed with a mild detergent. A solution of 1 part white vinegar to 5 parts water may be used to dissolve these deposits.

Abrasive Cleaner Warning—the need to use harsh cleaners or toxic chemicals is not necessary to maintain your new glass enclosure. When cleaning your glass be careful not to use any rough, gritty, highly acidic or abrasive cleaners that may remove the surface of the glass and damage any coating or hardware finish, therefore voiding any warranty.

Recommended Cleaners

The manufacturers have tested and approved the following products as preferred cleaners:

- Glass Cleaner
- Green Works Natural Glass & Surface Cleaner
- Lysol Bathroom Cleaner
- Tilex
- Fantastik
- Soft Scrub

General Precautions

- Avoid abrasive cleaners such as Ajax, Comet powder, rouge or cerium oxide.
- Hydrofluoric and Phosphoric acid are corrosive to the coating and glass surfaces and should not be used.
- Do not use abrasive brushes, razor blades or sharp objects which may scratch the glass or coating.
